

AI that picks up the phone — in your partner's language.

A multilingual voice-agent platform that calls inbound AP leads instantly, speaks 9 Indian languages natively, handles the 5 core objections, and scores every conversation HOT / WARM / COLD for the human RM.

18% → 40%+

AP CONVERSION GOAL

100%

CALLS SCORED + LOGGED

THE GAP

Inbound AP leads leak before a human can call them.

Rupeezy's AP partner program has a top-of-funnel problem: leads come in fast, but humans pick up the phone slowly — and when they do, half the time they don't share a language with the partner. We're shipping the agent that closes both gaps.

18%

today's AP conversion

Best-case under current human-only outreach. Most leads are talked to days late, if at all.

<5min

before a hot lead cools

Industry data on inbound finance leads. Human dialers can't beat this clock at scale.

9

languages partners speak

Hindi · Hinglish · English · Tamil · Telugu · Marathi · Gujarati · Bengali · Punjabi.

Three pillars. One unfair advantage.

INSTANT

Auto-dial in seconds

A new lead lands in the admin →
Twilio places the call before the
partner closes the form. Batch-dialing
fans out to 10+ leads at once.

MULTILINGUAL

Native in 9 languages

ElevenLabs Scribe v2 transcribes any
of 9 Indian languages auto-detected.
Kimi-K2.6 reasons in-language. Turbo
TTS replies in matching voice.

INTELLIGENT

Scored & summarised

Every call ends with a HOT / WARM /
COLD score, an objection list, a next-
action recommendation, and a full
transcript — for the RM, not the
agent.

RESULT

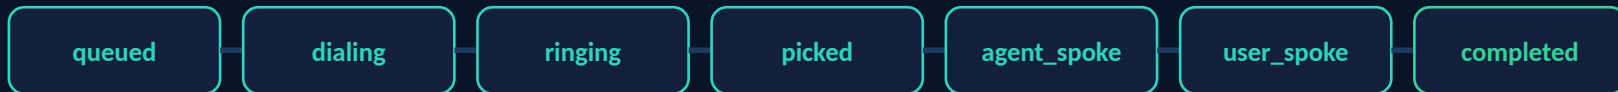

Every inbound lead gets a real conversation in the right language — before the competitor's WhatsApp arrives.

ARCHITECTURE

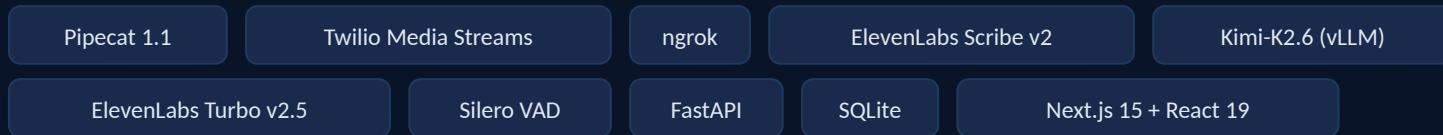

From CSV upload to a scored conversation in one pass.

CALL LIFECYCLE — recorded as events for the operations DAG

STACK

WHAT'S SHIPPED — MVP

An ops console the RM team can actually run on.

Live operations DAG

Aggregate funnel + per-call mini-DAGs.
Drop-off branches surface failed dials in real time.

Call review with waveform

WaveSurfer.js audio scrubbing, full transcript, stage timeline, AI summary side-by-side.

Bulk lead upload

CSV import, voice picker per lead, RM notes flowing straight into the system prompt.

Per-lead voice + persona

Curated 10-voice ElevenLabs catalogue.
Agent name, brand, pronouns all set via .env.

Analytics dashboards

Recharts views: stage funnel, calls/day, score split. Refresh-driven, no extra cron.

JWT-secured admin

Single predefined operator from .env, HS256-signed sessions, 401 auto-redirects to login.

R U N I T N O W

**Three terminals.
Three commands.**

uv run api

FastAPI + Pipecat /ws

ngrok http 8000

Public WS for Twilio

npm run dev

Next.js admin :3000

WHAT'S NEXT

From hackathon MVP to revenue infrastructure.

PROJECTED IMPACT

18% → 40%+

AP partner conversion rate target.

Driven by zero-latency dialing, native-language rapport, and a scoring layer the RM trusts.

WhatsApp follow-up

Auto-send the call summary + brochure in the partner's language seconds after hang-up.

Realtime supervisor barge-in

RM can take over the call mid-flight when the agent flags a HOT signal.

Voice cloning per RM

Each RM can train a 30-second clone so reassigned calls feel continuous.

CRM + Salesforce sync

Two-way sync of leads, transcripts, and scores. No more spreadsheet exports.

Multi-tenant for adjacent programs

Same engine for any inbound-heavy partner pipeline — insurance, lending, B2B SaaS.

Built in a hackathon. **Designed to ship.**
